

January 2025
PUBLIC SERVICE ANNOUNCEMENT
for residents of the Village of Lyons

As a normal winter weather precaution and in anticipation of the **upcoming stretch of frigid weather, (1/19/25 - 1/23/25) please take some time to make sure that your pipes, water meter, and lines are properly insulated.** Pipe insulation and/or heat tape are recommended and can be placed around and on these surfaces. If you live in a mobile home, make sure the underneath of your home is insulated and proper skirting in place. Leave water running a drip on the extreme cold nights/days. Be vigilant to any signs of water leaking and contact the proper people if you see this. If the leak is between the road and your water meter, please contact the Village for assistance at 989-855-2125 during business hours MWF 9-3, or 616-527-0400 during non-business to be connected with someone who can help. If the leak is after your water meter and into your home, then please contact a plumber to assist you in all repairs. If your water meter and/or lines burst due to no insulation, then you as the homeowner will be responsible for any costs incurred for all repairs. If your pipes do freeze, please do not put space heaters under your floors or in enclosed spaces as this poses a severe fire hazard. Stay safe, warm, and prepared throughout the upcoming weather event and the remainder of the winter season. Your cooperation in this is much appreciated.
